

# Transforming Lives and Building a Better Future

*A bold new plan to ensure quality services for people with disabilities for years to come*

For 65 years, Jefferson Rehabilitation Center has provided support, independence and opportunity to children and adults with developmental and intellectual disabilities. Thanks to JRC's dedication, people with disabilities are able to achieve personal goals, realize their dreams and live fulfilled, meaningful lives.

While our organization has grown, our primary services building on Gaffney Drive has not seen major renovations or improvements in decades. However, we now have plans for a state-of-the-art expansion to ensure the growing number of people with disabilities can reach their fullest potential.

**We invite you to be a part of this sweeping upgrade to JRC, which will improve the lives of so many in our communities. The need is great and the time is now. Please join us.**

## Assist Children in Learning and Growth

- Expand and upgrade classrooms, play areas and physical therapy spaces to serve more children in a positive and engaging environment.
- Build two sensory stimulation Snoezelen rooms with modern technology to help children with Autism.
- Provide dedicated speech therapy rooms with a quiet, distraction free environment
- Create a separate nursing exam area for more privacy.

## Help Adults Reach Their Full Potential

- Install a motorized ceiling track system for safer, more dignified wheelchair transfer.
- Build a living skills room to develop independence skills, including dining, self-care, and time management.
- Add a quiet comfort room to soothe those in emotional or behavioral distress and provide psychological services in privacy.
- Update the existing Snoezelen room with progressive sensory items which include both sight and sound to stimulate adults with Autism.

## Transform JRC into a Modern Facility

- Relocate pick up/drop off location and redirect bus traffic to avoid stacking up on Gaffney Drive.
- Add exterior canopies at entrances to shelter people during loading and unloading of busses.
- Improve safety by developing separate, secure entrances for children, adults, staff and people using the clinic.
- Widen all rooms, hallways, doorways, and restrooms to accommodate modern mobility equipment such as motorized wheelchairs.
